Rogers, Chad Schulze

Thanks, Jill. I will incorporate these additions in the overall document.

These questions and documents are really just speaking points in the case of reporters' or the public's questions on this issue.

They are not for website posting or other distribution.

I appreciate your input,

Christine Decker Stone

Dear All,

Thanks for the opportunity to look at the Q's and A's developed for gov't officials to in preparation for the Triangle Lake meeting. We recognize that some of you are already en route to the meeting, but we had some comments we'd like you to consider beforehand. Overall, the document does a nice job of covering a broad range of issues and "telling the story" of gov't efforts to address the citizens' concerns.

Our primary comment concerns the text about the levels of imazapyr in the school drinking water. We typically try to avoid extrapolations like how much water an individual would have to drink before he had a problem. In the attached document I have suggested an alternative way of representing the margin of safety that does not imply the certainty that numbers may seem to indicate. Such calculations tend to oversimplify and may make it seem like a more definitive conclusion, without addressing the assumptions and uncertainties behind the numbers.

The other comment just adds a little more context for the federal role in pesticide risk management as implemented through labeling.

Thank you in advance for your consideration.

Subject:Fw: see if this is correct.

FYI: Christine Stone revised the draft that was sent at 12:09 pm today.
Please note that she said this document is for INTERNAL federal and
state agencies use only ---as talking points for the public meeting.

Mark: I am forwarding this to you since I saw that Kay sent you the
first draft.
Linda

Sorry to send this again. But someone found an error. And again, we
refined our answer about Dr. Barr's results.
Please use these.
These are for internal use by our experts to be used when talking to
people. It is a way we all have accurate answers to this complex issue.
